

B. AMENDMENT TO THE CLAIMS

1. (Currently amended) An electroluminescent polymer, represented by the following formula (1):

wherein X_1 to X_5 are independently a hydrogen atom, a linear alkyl or alkoxy group having 1 to 40 carbon atoms, a branched alkyl or alkoxy group having 3 to 40 carbon atoms, a cyclic alkyl group having 5 to 40 carbon atoms, a silyl group, or an aromatic group having 6 to 14 carbon atoms which is unsubstituted or substituted with at least one selected from the group consisting of an alkoxy group having 1 to 40 carbon atoms and an amine group, wherein at least one of the X substituents is ~~not a hydrogen~~ an alkoxy group; and wherein the variable "n" is an integer in the range of 30 to 3,000.

2. (Original) The electroluminescent polymer as defined in claim 1, wherein the number average molecular weight of the electroluminescent polymer is about 10,000-1,000,000, and the molecular weight distribution thereof is about 1.5-5.0.
